**Q : 1) The length of national highway (km) as per Lucknow road plan is given by**

**A : Area of the country (km<sup>2</sup>)/75**

**B : Area of the country (km<sup>2</sup>)/50**

**C : Area of the country (km<sup>2</sup>)/40**

**D : Area of the country (km<sup>2</sup>)/25**

**Q : 2) The objective of Pradhan Mantri Gram Sadak yojana is to provide all weather roads to the eligible unconnected habitations in the rural areas with a population of**

**A: 250 persons and above in plain areas and 100 persons and above in hilly and desert areas**

**B : 500 persons and above in plain areas and 250 persons and above in hilly and desert areas**

**C : 1000 persons and above in plain areas and 500 persons and above the hilly and desert areas**

**D : 2000 persons and above in plain areas and 500 persons and above in hilly and desert areas**

**Q : 3) According to Nagpur plan, Indian roads have been classified into how many categories?**

**A : 4**

**B : 5**

**C : 6**

**D : 7**

**Q : 4) The road foundation for modern highways construction, was developed by:**

**A : Tresaguet**

**B : Telford**

**C : Telford and macadam simultaneously**

**D : Macadam**

**Q : 5) On the recommendations of Nagpur conference, the minimum width of a village road may be:**

**A : 2.25 m**

**B : 2.45 m**

**C : 2.75 m**

**D : 3.65 m**

**Q : 6) For the administration of road transport, a motor vehicle act was enacted in:**

**A : 1927**

**B : 1934**

**C : 1939**

**D : 1947**

**Q : 7) The zero mile stone in Indian is located at:**

**A : Patna**

**B : Chhindwara**

**C : Seoni**

**D : Nagpur**

**Q : 8) For night travel, the length of a valley curve should be such that, the head-light beam distance is the same as**

**A : Stopping sight distance**

**B : Overtaking sight distance**

**C : Sum of (a) and (b)**

**D : Difference of (a) and (b)**

**Q : 9) On a circular curve, the rate of super elevation is 'e' while negotiating the curve, vehicle comes to a stop. It was observed that the stopped vehicle is sliding inwards in radial direction. If the coefficient of friction is 'f' which of the following is true?**

**A :  $e > f$**

**B :  $e < f$**

**C :  $e < 2f$**

**D : None of these is correct**

**Q : 10) If the cross slope of a terrain is 20%, according to IRC classification, it is a :**

**A : Plain terrain**

**B : Rolling terrain**

**C : Mountainous terrain**

**D : Steep terrain**

**Q : 11) According to Indian road congress, the width of carriageway is**

- 1. 3.75 m for single lane**
- 2. 7.0 m for two lanes without raised kerbs**
- 3. 7.5 m for two lanes with raised kerbs**

**Which of these statement(s) is/are true?**

**A : 1 and 2**

**B : 2 and 3**

**C : 1 and 3**

**D : 1, 2 and 3**

**Q : 12) As per I.R.C. it is considered appropriate that roads in rural areas should be designed for**

**A : 15-20 years**

**B : 10-15 years**

**C : 5-10 years**

**D : 20-25 years**

**Q : 13) A line, on either side of the road between which and the road, no building activity is permitted at all, is called as**

**A : Carriage way**

**B : Control line**

**C : Building line**

**D : Road way**

**Q : 14) What is the bending material in water bound macadam roads?**

**OR**

**In semi-grouted macadam pavement the binding material is**

**A : Brick powder**

**B : Stone dust**

**C : Construction waste**

**D : Line powder**

**Q : 15) What is the value of camber that should be provided in case of WBM pavement surface in an area of heavy rainfall?**

**A : 1 in 30**

**B : 1 in 48**

**C : 1 in 60**

**D : 1 in 72**

**Q : 16) Geometric design of highway includes (i) horizontal alignment, (ii) vertical alignment, (iii) Arbouri-culture, (iv) Cross section.**

**Choose the right combination.**

**A : (i), (ii) and (iii)**

**B : (i), (ii) and (iv)**

**C : (ii), (iii) and (iv)**

**D : (i), (ii), (iii) and (iv)**

**Q : 17) At highway stretches where the required overtaking sight distance cannot be provided, in such sections it is necessary to incorporate at least**

**A : Three times the stopping sight distance**

**B : One-third of the required intermediate sight distance**

**C : Half of the required intermediate sight distance**

**D : Twice the stopping sight distance**

**Q : 18) The instrument used to measure roughness index is**

**A : Profilometer**

**B : Delfectometer**

**C : Brinellnometer**

**D : Bump integrator**

**Q : 19) The minimum value of camber provided for thin bituminous surface hill roads, is :**

**A : 0.022**

**B : 0.025**

**C : 0.03**

**D : 0.035**

**Q : 20) A district road with a bituminous pavement has a horizontal curve of 1000 m for a design speed of 75 kmph. The super-elevation is**

**A : 1 in 40**

**B : 1 in 50**

**C : 1 in 60**

**D : 1 in 70**

**Q : 21) What is the recommended shape of chamber?**

**A : Straight**

**B : Parabolic**

**C : Straight at edge and parabolic in middle**

**D : Parabolic at edges and straight at middle**

**Q : 22) What is the limiting gradient recommended by Indian roads congress for roads in plain terrain?**

**A : 5.0%**

**B : 4.0%**

**C : 6.0%**

**D : 4.5%**

**Q : 23) The 'Lag distance' is the distance traveled by the road vehicle is called**

**A : Perception time**

**B : Volition time**

**C : Emotion time**

**D : Total reaction time**

**Q : 24) The shape of camber best suited for cement concrete pavement is**

**A : Straight line**

**B : Parabolic**

**C : Elliptical**

**D : Combination of straight and parabolic**

**Q : 25) The side drains are provided on both the sides of the roadway, when the road is**

**A : Along salient curve**

**B : In cutting**

**C : Along re-entrant curve**

**D : All of these**

**Q : 26) The desirable length of overtaking zone as per IRC recommendation is equal to:**

**A : Two times the overtaking sight distance**

**B : Three times the overtaking sight distance**

**C : Five times the overtaking sight distance**

**D : Overtaking sight distance**

**Q : 27) The expression for the length of a transition curve ( $L_s$ ) in meters is**

**A :  $L_s = \frac{V^3}{CR}$**

**B :  $L_s = \frac{V^3}{16CR}$**

**C :  $L_s = \frac{V^3}{24CR}$**

**D :  $L_s = \frac{V^3}{46.5CR}$**

**Where C = rate of change of radial acceleration in  $\text{m/s}^3$**

**R = Radius of the circular curve in meters  
and**

**V = Speed of vehicles in kmph**

**Q : 28) Excessive camber on pavements may cause**

**A : Deterioration of central portion**

**B : Erosion of the berms**

**C : Slip of the speedy vehicles towards the middle**

**D : All of these**

**Q : 29) Full amount of extra width of pavement, one curve, is provided at**

**A : Beginning of the transition curve**

**B : Centre of the transition curve**

**C : Beginning of the circular curve**

**D : Centre of the circular curve**

**Q : 30) If the difference in elevation of an edge of the pavement, 9 m wide and its crown is 15 cm, the camber of the pavement is**

**A : 1 IN 60**

**B : 1 in 45**

**C : 1 IN 30**

**D : 1 IN 15**

**Q : 31) Equivalent factor of PCU for a passenger car as per IRC is**

**A : 1.0**

**B : 2.0**

**C : 0.5**

**D : 10**

**Q : 32) The shoulder provided along the road edge should be**

**A : Rougher than the traffic lanes**

**B : Smoother than the traffic lanes**

**C : Of same colours that of the pavement**

**D : Of very low load bearing capacity**

**Q : 33) Stopping sight distance is always:**

**A : Less than overtaking sight distance**

**B : Equal to overtaking sight distance**

**C : More than overtaking sight distance**

**D : Equal to lag distance**

**Q : 34) In the absence of super-elevation, the formation of pot holes is generally found:**

**OR**

**If super elevation is not provided on a horizontal curve of a highway, then on which portion of the road are the pot holes likely to develop:**

**A : On the outer edge of road**

**B : In the inner edge of road**

**C : In the middle of the road**

**D : Anywhere along the width of the road**

**Q : 35) The maximum rate of change of radial acceleration allowed on transition curves is:**

**A : 100 mm/sec<sup>3</sup>**

**B : 300 mm/sec<sup>3</sup>**

**C : 400 mm/sec<sup>3</sup>**

**D : 500 mm/sec<sup>3</sup>**

**Q : 36) For the design of super elevation for mixed traffic conditions, the speed is reduced by**

**A : 12%**

**B : 18%**

**C : 25%**

**D : 30%**

**Q : 37) If super-elevation is not provided on a horizontal curve, then the pressure on the outer wheel will be**

**A : Less than the pressure on inner wheel**

**B : More than the pressure on the inner wheel**

**C : Equal to the pressure on inner wheel**

**D : None of these**

**Q : 38) The extra widening required for pavement of width 10.5m. On a horizontal curve of radius R meters is given by**

**A :  $\frac{\ell^3}{2R}$**

**B :  $\frac{2\ell^2}{3R}$**

**C :  $\frac{\ell^2}{R}$**

**D :  $\frac{3\ell^2}{2R}$**

**Where, l = length of wheel base of vehicle in.m.**

**Q : 39) Which of the following is taken into consideration while determining overtaking sight distance in four lane highway?**

**A : Distance covered during time**

**B : Distance covered during overtaking operation**

**C : Reaction distance plus overtaking distance**

**D : Distance covered during reaction time plus distance covered during overtaking operation plus distance covered by the opposing traffic**

**Q : 40) In a sag curve, a minimum of stoppage distance is determined with assumptions of headlight \_\_\_\_\_ and beam tilted at an upward angle of \_\_\_\_\_.**

**A : 1.0 m and  $2^\circ$**

**B : 0.75 m and  $2^\circ$**

**C : 1.0m and  $1^\circ$**

**D : 0.75 and  $1^\circ$**

**Q : 41) Widening at curves provided to compensate the extra width occupied by a vehicle on the curve due to tracking of the rear wheels is called**

**A : Mechanical widening**

**B : Psychological widening**

**C : Super widening**

**D : Extra widening**

**Q : 42) Roughness index of roads is expressed as :**

**A : Size of the stone on the pavement**

**B : Number of patches on the pavement**

**C : Cumulative deformation of surface per horizontal distance**

**D : Type of the road surface**

**Q : 43) The rate of equilibrium super-elevation on a road is**

- 1. Directly proportional to the square of vehicle velocity**
- 2. Inversely proportional to the radius of the horizontal curve**
- 3. Directly proportional to the square of the radius of the horizontal curve**

**Which of the above statements are correct?**

**A : 1 and 2 only**

**B : 1 and 3 only**

**C : 2 and 3 only**

**D : 1, 2 and 3**

**Q : 44) A barrel camber consists of**

**A : Two straight slopes joining at the center**

**B : Two straight slopes with a parabolic crown in the center**

**C : A continuous curve either parabolic or elliptical**

**D : None of the above**

**Q : 45) The sight distance available in a road to a driver at any instance depends on**

- 1. Features of the road ahead**
- 2. Height of the driver's eye above the road surface**
- 3. Height of the object above the road surface**

**A : 1 and 2 only**

**B : 1 and 3 only**

**C : 2 and 3 only**

**D : 1, 2 and 3**

**Q : 46) In pavement design considerations, the maximum width if the vehicle is usually fixed and followed. The vehicle width affects all of the following except:**

**A : Width of the traffic lanes**

**B : Shoulders**

**C : Parking facilities**

**D : Drainage layer**

**Q : 47) Equivalent axle load factor (EALF) defines**

**A : number of passes of the axle in question to the number of passes of standard axle**

**B : number of passes of a single axle to the passes of axle in question**

**C : damager per pass to a pavement by the axle in question relative to the damage per pass of a standard axle**

**D : None of the above**

**Q : 48) Rumble strips are preferred on main roads as they**

**A : Incorporate changes in pavement texture by artificial corrugations**

**B : Produce noise and physical sensation on the steering**

**C : Reduce the speed on the roads**

**D : Provide a number of humps on the roads**

**Q : 49) In total reaction of the driver, the time required for the sensations received by the eyes/ears to be transmitted to the brain through the nervous system and spinal chord is called \_\_\_\_\_.**

**A : Intellection time**

**B : Emotion time**

**C : Volition time**

**D : Perception time**

**Q : 50) In urban areas, when the volume of cycle traffic is high, minimum width provided for the cycle track is:**

**A : 3.65 m**

**B : 3.0 m**

**C : 2.0 m**

**D : 1.5 m**

**Q : 51) Sliding considerations for stopped vehicles on super elevated horizontal curves provide the following bound on the amount of super elevation,  $e$ ,**

**A :  $e \geq$  coefficient of rolling friction**

**B :  $e \geq$  coefficient of side friction**

**C :  $e \leq$  coefficient of rolling friction**

**D :  $e \leq$  coefficient of side friction**

**Q : 52) Superior the road**

**A : Steeper is the cross slope (or) camber**

**B : Gentler is the camber**

**C : Steeper is the super elevation**

**D : Lesser is the cost**

**Q : 53) On a circular curve, the rate of super elevation is  $e$ , while negotiating the curve a vehicle comes to a stop. It is seen that the stopped vehicle does not slide inwards (in the radial direction). The coefficient of side friction is  $f$ . which of the following is true :**

**A :  $e \leq f$**

**B :  $f < e < 2f$**

**C :  $e \geq 2f$**

**D : none of the above**

**Q : 54) Maximum allowable grade are lower for railways than for highways because**

**A : Construction costs become prohibitive for railways at high grades**

**B : Trains are longer than vehicles which use the highways**

**C : High grades cause discomfort to passengers**

**D : Steel wheels on steel rails have lower frictional coefficient than rubber tyres on pavements.**

**Q : 55) The important factor considered in the design of summit curves on highway is**

**A : Comfort to passengers**

**B : Sight distance**

**C : Super elevation**

**D : Impact factor**
