Civil Engineering है अगर सपना तो ध्राहरी है अपना

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:1) The relation between void ratio 'e', water content 'W', specific gravity 'G' and degree of saturation 'Sr' for a soil sample is:

$$A:e=\frac{WG}{Sr}$$

$$B:e=\frac{WSr}{G}$$

$$C: e = \frac{W}{G Sr}$$

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 2) Undisturbed soil samples are

obtained by:

A: Thick walled samplers

B: Direct excavations

C: Thin walled samplers

D: Augers

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:3) A soil sample has bulk density of 21 kN/m³ and water content 8%. Dry density of the sample is:

 $A: 19.00 \text{ kN/m}^3$

 $B: 18.44 \text{ Kn/m}^3$

C: 22.68 kN/m³

 $D: 19.44 \text{ kN/m}^3$

For Any Query Call - 8595517959 | Website - everexam.org

Daily Class – 7:00 PM

Q:4) A load of 4000 kN is uniformly distributed over an area of 3m × 3m. Average vertical stress at a depth of 2m below will be (assuming 2 vertical: 1 horizontal distribution):

 $A:250 \text{ kN/m}^2$

 $B:160 \text{ kN/m}^2$

 $C:200 \text{ kN/m}^2$

 $D:220 \text{ kN/m}^2$

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:5) The permeability of a soil sample will be _____ if entrapped air is present in the sample.

A: Decreased

B: Unaffected

C: Increased

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:6) Most suitable method for drainage

of fine grained soil is:

A: Well point system

B: Vacuum method

C: Electro-osmosis method

D : Deep well system

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class - 7:00 PM

Q:7) A cantilever sheet pile derives its

stability from:

A: Self-weight of sheet pile

B: Lateral resistance of soil

C: Anchor road

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:8) If a weak plane exists above the toe of typical slope, the probable failure of the slope is excepted as (considering the stability of the slope):

A: Slope failure

B: Base failure

C: Transitional failure

D: Toe failure

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 9) According to Terzaghi's equation, the bearing capacity of strip footing resting on cohesive soil ($C = 10 \text{ kN/m}^2$) per unit depth and unit width ($N_c = 5.7$) will be:

 $A:47 \text{ kN/m}^2$

 $B:67 \text{ kN/m}^2$

 $C: 57 \text{ kN/m}^2$

 $D:77 \text{ kN/m}^2$

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 10) The maximum differential settlement in isolated footings on sandy soils shall not exceed:-

A: 40 mm

B: 100 mm

C: 65 mm

D: 25 mm

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 11) The major loss of hydraulic energy in pipe flow occurs in long pipe due to:

A: Sudden enlargement

B: Friction

C: Sudden contraction

D: Gradual enlargement or contraction

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 12) The best hydraulic channel crosssection should have:

A: Least cost

B: Minimum wetted perimeter

C: Maximum area for a given flow

D: Minimum roughness coefficient

For Any Query Call - 8595517959 | Website - everexam.org

Daily Class – 7:00 PM

Q: 13) The conditions for the flow of fluid in Bernoulli's equation are assumed as:

A: Steady, incompressible and ideal

B: Steady, irrotational and uniform

C: Steady, uniform and incompressible

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 14) The gases are considered incompressible if Mach number is

A := 0.50

B:>0.30

C:=1

D: < 0.20

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:15) The type of vortex for the flow of water in a wash basin, when it is being emptied through a central opening, is called:

A: Forced vortex

B: Rotational vortex

C: Free vortex

D: Rankine vortex

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 16) The expression for kinematic viscosity of a fluid is:

A: Dynamic viscosity x density

B: Dynamic viscosity / density

C: Dynamic viscosity x pressure

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 17) Choose the most correct statement for pipe in series problems:

A: The discharge is same through each pipe

B: The discharge through each pipe is additive to total discharge

C: The head loss is the same through each pipe

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 18) Surge tank in a pipe line is used

to:

A: Reduce the loss of head due to friction

in pipe

B: Make the flow uniform in pipe

C: Release the pressure due to water

hammer

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 19) For turbulent flow through rough

pipe, the factor $\frac{Re\sqrt{f}}{R/k}$ is (Notation have their usual meaning):

A:>16

B:>400

C:>70

D: < 70

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 20) Notches are used to measure:

A: Flow rate

B: Velocity

C: Pressure

D: All above

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 21) In laminar flow between parallel plates, the ratio of maximum velocity and average velocity of flow is:

A: 2.0

B: 1.33

C: 1.5

D: 1.0

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 22) Pitot tube measures:

A: Pressure head only

B: Total head only

C: Velocity head only

D: Above all

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 23) The loss of energy due to sudden enlargement in a pipe is given by:

 $A: V^2/2g$

 $B: kV^2/2g$

 $C: 0.5V^2/2g$

 $D: (V_1-V_2)^2/2g$

(Where symbols have their usual meanings)

For Any Query Call - 8595517959 | Website - everexam.org

Daily Class – 7:00 PM

Q: 24) A model of a spillway with scale ratio 1: 9 is to be tested in a laboratory. What will be the discharging capacity of the model if the discharge over prototype spillway is 486 m³/sec?

 $A: 0.25 \text{ m}^3/\text{sec}$

 $B : 1.0 \text{ m}^3/\text{sec}$

C: 2m³/sec

 $D: 2.5 \text{ m}^3/\text{sec}$

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 25) If the flow around a sphere is taking place with Reynolds number is just greater than 500×10^3 , the value of CD will be: $(C_D = Drag coefficient)$:

A:0.50

B: 0.20

C: 0.25

D: 0.10

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class - 7:00 PM

Q: 26) For flows through porous media, Darcy's law is applicable when Reynold's number is:

 $A:\leq 2$

B := 0.1

C :> 1

D : ≤ 1

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 27) Cavitation in a pipe is caused

when:

A: High velocity

B: Pressure approaches vapour pressure

C: Low velocity

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 28) Continuity equation is based on

the principle of:

A: Conservation of mass

B: Conservation of energy

C: Conservation of momentum

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 29) If Vs is the tangential velocity of flow around a curved path and R is the radius of curvature, the normal acceleration for the flow will be:

A: Vs/R

 $B: Vs/R^2$

 $C: V^2s/R$

 $D: V^2s/R^2$

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:30) A spherical particle of diameter 0.4 mm is falling in water with a velocity of 0.4 m/sec, the drag coefficient for the particle will be:

A: 1.50

B: 15.00

C: 180.00

D: 150.00

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:31) Moody's diagram is drawn

between:

A: Friction factor and Reynold's number

B: Friction factor, Reynold's number and

relative roughness

C: Friction factor and relative roughness

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:32) To avoid an interruption in flow of

a syphon, an air vessel is provided:

A: At the summit

B: At the inlet

C: At the outlet

D: At any point between inlet and outlet

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:33) If the conjugate depth before and after the jump are 0.5 m and 2.5 m respectively, the loss of energy in the hydraulic jump will be:

A: 0.80 m

B: 3.20 m

C: 6.40 m

D: 1.60 m

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:34) For a two dimensional flow, the stream function is given by ψ = 2xy. The velocity at a point (3, 4) is equal to:

A:6m/sec

B:8m/sec

C: 10m/sec

D: 12m/sec

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:35) Mach number is the ratio of:

A: Inertia force to viscous force

B: Characteristic velocity to velocity of

sound

C: Viscous force to inertia force

D: Velocity of sound to characteristic

velocity

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 36) The pressure rise due to water hammer depends upto:

A: Velocity of flow of water in pipe

B: Length of pipe

C: Time taken to close the valve

D: All the above

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:37) Dimension of the kinematic

viscosity is:

 $A:L^2T^{-1}$

 $B: ML^{-2}T^2$

 $C: ML^{-1}T^{-1}$

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:38) The coefficient of discharge, C_d in terms of C_v and C_c is given by (Notations have their usual meaning):-

$$A:C_d=$$

$$B: C_d = Cv \times Cc$$

$$\mathbf{C}:\mathbf{C}_{\mathsf{d}}=\frac{C_c}{C_v}$$

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:39) For laminar flow in a circular conduits, the energy correction factor α is taken as:

A: 1.33

B: 1.03

C: 2.00

D: 2.50

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:40) To study the cruising of supersonic missiles in air by using dimensional analysis technique, which of the two dimensionless numbers will be of significance:

A: Reynolds number and Froude's number

B: Weber number and Mach number

C: Weber number and Froude's number

D: Reynolds number and Mach number

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class - 7:00 PM

Q:41) Lining of a canal is necessary:

A: To prevent erosion of bed and sides

due to high velocities

B: To minimize the seepage of looses

C: To increase the discharge by increasing

velocity

D: All of the above

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 42) A channel designed using Lacey's theory has mean velocity of 1m/sec and silt of one, the hydraulic radius for channel will be:

A:2 m

B: 2.5 m

C: 1.0 m

D: 0.50 m

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 43) The purpose of cross regulator in a canal is:

A: To regulate water supply in the off-taking channel

B: To regulate water supply in the main channel

C: To head up water for adequate supply into the off-taking channel

D: To regulate excessive flood water

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:44) Entry of silt into the canal is

controlled by:

A: Silt excluder

B: Silt extractor

C: Silt ejector

D: Head regulator

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 45) In the hydraulic jump, the flow condition is:

A: Gradually varied

B: Rapid

C: Un-steady

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 46) The maximum compressive force in a gravity dam exists When

the reservoir is full:

A: At the heel

B: At the centre of base

C: Within middle third of base

D: At the toe

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 47) The most adverse condition for stability of slope for the upstream face of an earthen dam is:

A: Steady seepage

B: Reservoir empty

C: Sudden draw down

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 48) In a river, spurs are provided:

A: To train the flow along a specified

course

B: To confine the width of river

C: To reduce the flood peak

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:49) At the site where an aqueduct is constructed, the width of river is 111 m. If there are 6 piers (each of width 1 m), the width of water way will be:

A:5 m

B: 10 m

C: 15 m

D: 20 m

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:50) Which of the following dams of India is an example of arch dam?

A: Tehri dam

B: Idukki dam

C: Bhakra dam

D: Sardar Sarovar dam

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 51) For uniform flow in a rectangular channel which one is correct statement $(S_o = \text{bed slope}, S_f = \text{energy slope}, \text{and } S_w = \text{water surface slope})$:

$$A:S_b=S_f>S_w$$

$$B: S_b > S_f > S_w$$

$$C: S_b = S_f = S_w$$

$$D: S_f > S_b > S_w$$

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 52) Lacey's regime equation for longitudinal slope, 'S' of canal is given by (Q = discharge, f = Lacey's factor and R = Hydraulic mean radius):-

 $A: S = f^{3/2} / 8980 R^{1/2}$

B: $S = f^{5/3} / 8990 R^{1/2}$

 $C: S f^{5/3} / 3340 Q^{1/6}$

D: None of these

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:53) A soil composed of loose granular graded material which can be scoured off with the same ease with which it is deposited is known as:

A: Silty loam

B: Incoherent alluvium

C: Sandy clay

D: Regime silt

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:54) The discharge per unit draw down

at the well is known as:

A: Specific yield

B: Specific storage

C: Specific retention

D: Specific capacity

For Any Query Call - 8595517959 | Website - everexam.org

Daily Class – 7:00 PM

Q:55) According to Khosla's theory, the exit in the absence of a downstream cutoff is:

A: Zero

B: Unity

C: Infinity

D: Very large

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q: 56) In a sarda type fall, rectangular crest is used for discharge upto:

A: 6 cumecs

B: 14 cumecs

C: 10 cumecs

D: 20 cumecs

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:57) If the sediment size is 0.81 mm

the silt factor will be:

A: 1.721

B: 1.010

C: 0.900

D: 1.584

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:58) In case of non-availability of space due to topography, the most suitable spillway in this condition is-

A: Straight drop spillway

B: Chute spillway

C: Shaft spillway

D: Ogee spillway

For Any Query Call – 8595517959 | Website – everexam.org

Daily Class – 7:00 PM

Q:59) If critical velocity ratio C.V.R is 2.0, one of the following will occur.

A: Silting in canal

B: Scouring in canal

C: Both silting & scouring

For Any Query Call - 8595517959 | Website - everexam.org

Daily Class – 7:00 PM

Q:60) By using Bligh's theory for the design of floor if residual head at any section is 0.42 m and specific gravity of material is 2.4, what will be thickness of floor?

A: 0.50 m

B: 0.40 m

C: 0.25 m

D: 0.30 m
