Q:) The design shear force at the critical section in a rectangular beam of width 300 mm and effective depth 500 mm is 270 kN. The permissible shear stress in concrete on the basis of % of steel reinforcement is 0.4 N/mm^2 . Which of the following statement is correct? Take $\tau_{\text{cmax}} = 1.6 \text{ N/mm}^2$
[UPSSSC JE 2016]

A : The shear reinforcement shall be designed for a shear force 30kN.

B : The shear reinforcement shall be designed for a shear force of 210 kN./210 kN

C : The shear reinforcement shall be designed for a shear force of 270 kN

D : The beam section must be redesigned.

Q:) The minimum area of tension reinforcement (A_s) of steel "P" in a singly reinforced beam of width "b" and effective depth "d" is

[RAJASHTAN JE 2015]

A : $0.85bd/f_y$

B : $0.85 bd$

C : $0.5 bd f_y$

D : bd/f_y

Q:) Torsion resisting capacity of given reinforce concrete section.....

[SSC JE 2017]

A : Decrease with decrease in stirrups spacing

B : Decrease with increases in longitudinal bars

C : Does not depend upon stirrups and longitudinal steels

D : Increase with the increases in stirrups and longitudinal steels.

Q:) The following statements (S1,S2,S3) [SSC JE 2019]

S1 These beams are deeper when compared to a balanced beam section

S2 The failure of the beam takes place due to failure of steel

S3 these beams undergo large deflections at failure

Choose the correct statements.

A : S1 and S2

B : S2 and S3

C : S1 and S3

D : S1,S2 and S3
